

# Forms For People:

## designing forms that people can use

by Robert Barnett

## Table of Contents

### PART 1 • UNDERSTANDING FORMS

#### Chapter 1 Types of Forms: *a chapter for beginners*

What is a form?

The wide variety of forms

#### Chapter 2 Foundation for Good Forms

Technology limitations

Problems people have with forms

Produce forms that work

Modern forms research

Common issues relating to forms failure

#### Chapter 3 Communication Basics

What do we mean—communication?

Forms as a means of dialogue

Empathy for the form user

Forms versus other communication

Literacy and readability

A further look at ethics and truth

#### Chapter 4 Forms Language

Forms language versus prose

A closer look at grammar

The “Plain Language” trap!

Problems with words

#### Chapter 5 Multilingual and Multicultural Forms

Major problems with multilingual forms

What are the solutions to multilingual form design?

Culture and form design

### PART 2 • FORMS ANALYSIS

#### Chapter 6 The Forms Analysis Process

The need for teamwork

Analysing and designing the form

Getting the process in the right sequence

Getting your information

Getting approval for your ideas

#### Chapter 7 Aids to Forms Analysis

Selecting the right tools

#### Chapter 8 Interviewing

The purpose of interviewing

Planning the interview

The interview

Communication dynamics of forms interviews

Interviews versus discussion groups

#### Chapter 9 The Needs of Users

How design impacts people

Psychological issues

Physical processing—the need for analysis

Where does the data come from?

What do people do with the information on the paper?

How and where will the form be filled out?

The use of signatures

Know the procedures

Storage and retrieval

Other forms processing activities

#### Chapter 10 Estimating and Costing

The need for estimating

Estimating design time

Divide time into manageable chunks

What if you don't know what's involved?

Costing the benefits

Estimating checklist

Areas of savings and increased costs

Estimating the costs

### PART 3 • FORM DESIGN

#### Chapter 11 Forms Typography

A brief history of modern typesetting

Typesetting technology

The shape of letters

Measuring type

Layout and spacing

Recommended type faces

Functional consistency

Selecting corporate typefaces for forms

#### Chapter 12 Basic Form Graphics

What makes up a document?

Building the form

The form page

Margins

Identifying forms

Data areas

Lines

Using reverse type

Side headings

Using ballot boxes

#### Chapter 13 Colour and Shading

What is colour?

Summary of the colour process

How we see colour on forms

The effect of paper on colour

The effect of different ink pigments on colour

Metamerism

The effect of ink film thickness on colour

Lightfastness of printing ink pigments

The human eye

Colour-defective vision

How the eye and brain interpret colour

Colour matching is a serious problem

Specifying colour

How to select the right colour

How many colours do you need?

Recommendations

Shading and tints

Variable toned tints

Colour bibliography

#### Chapter 14 Building Your Forms

How forms are structured

Office use only areas

Column layouts

Matrix layouts

Captioned floating boxes

Captioned pigeon-hole boxes

Form letter layout

Captioned line layout

Multiple choice ballot box layouts

#### Chapter 15 Questionnaire design

Why use questionnaires?

How people fill in forms

When the person can't answer the question

Making decisions

Making choices

Getting people to follow instructions

Old fashioned instructions

Instructions that work

#### Chapter 16 Forms for Aged People

Why this chapter was written

The issues

Some practical advice

## PART 4 • SPECIAL TYPES OF FORMS

### Chapter 17 Multipart Forms

How multipart forms began  
Data content  
Method of entry  
Perforations  
Binding and construction  
Paper weight  
Carbon paper  
Carbonless paper

### Chapter 18 Envelopes and Mailer Forms

Regulations and standards  
Envelopes  
Internal reusable envelopes  
Mailer forms  
Continuous envelopes

### Chapter 19 Computer Input Forms

The major problem with computer-related forms  
Programming and computer form design  
An ideal approach  
Problems we face with computer-related forms  
The nature of the form filler  
Public attitudes  
Input forms—size and space requirements  
Use of delimiters on input forms  
Captions on computer input forms  
Data sequence  
Colour  
Paper colour  
Types of questions  
Question layout  
Matching form layout to video terminal layout  
Major consideration—the type of user

### Chapter 20 Machine Readable Forms

Magnetic Ink Character Recognition (MICR)  
Bar codes  
Optical Mark Reading (OMR)  
Optical Character Recognition (OCR)  
Intelligent Hand Character Recognition (ICR/HCR)

### Chapter 21 Forms for Special Processing

Form design for source document microfilming  
Computer Output Microfilm (COM)  
Form design for facsimile transmission (fax)  
Forms for electronic imaging  
Forms for computer impact printers  
Forms for laser printers  
Forms for typewriters

## PART 5 • TESTING FORMS

### Chapter 22 Types of Errors People Make

The high cost of errors  
A closer look at some common causes  
Types of errors  
Dealing with errors

### Chapter 23 Traditional Methods of Testing

Where traditional methods go wrong  
Treating people as machines  
Using readability scores  
Charting paper flow  
Conducting pilot studies  
Gathering opinions with market research surveys  
What's wrong with focus groups  
Traditional methods and politics  
Testing that works

### Chapter 24 Using an Error Analysis

How to make use of an error analysis  
Deciding on feasibility  
A procedure for error analysis

### Chapter 25 Observational Useability Studies

Useability  
The value of observational studies  
The overall approach  
The size of the study  
Problems you may encounter  
The approach—form filling studies  
Testing reporting type forms  
Validity of results

### Chapter 26 Setting up a Testing Program

The most important ingredient  
Personnel  
Cost of testing  
Where do you start?  
what if you don't have time to test?  
On-going value

## PART 6 • FORMS PRODUCTION

### Chapter 27 Using a Computer for Design

Modern computer-aided design  
Evaluating computer needs for form design  
Keeping your computer in good working order

### Chapter 28 Paper for Forms

Types of paper used in forms printing  
Paper selection  
Paper weight  
Paper grain  
International Standard paper sizes

### Chapter 29 How Printing Works

Offset lithography printing  
Form printing presses  
Collators  
Numbering  
Check digits / modulus numbering

### Chapter 30 Getting Quality Printing

Paper artwork  
Telling the printer what you want  
Proofreading  
Configuring computer files  
Using PDF  
Check points  
Checking the finished job

## PART 7 • ELECTRONIC FORMS

### Chapter 31 Electronic Forms Overview

Putting these chapters into perspective  
What are electronic forms  
A warning from the past  
Early 21<sup>st</sup> Century  
Key features and benefits of electronic forms

### Chapter 32 Major Electronic Forms Issues

Using technology the right way  
Storage and transmission  
Hardware  
Software  
Relevant skills  
Basic management principles

### Chapter 33 Implementing Electronic Forms

Time frame  
Corporate strategy—the need for alliances and workgroups  
Training  
Helping users  
The 'Help Desk'

### Chapter 34 Electronic Forms Design Principles

Keep design simple  
Learning what people do with electronic forms  
Examine the business processes first  
Know your users  
Planning the form  
Do you have a data dictionary  
Start an 'issues' library  
Form conversion  
Testing is essential

### Chapter 35 Components of Electronic Forms

Five major components  
Designing data fields  
Using colour  
Using shading  
Boxes and lines  
Types of data  
Size of fields  
Giving instructions  
Giving instructions

### Chapter 36 Adding Intelligence to Electronic Forms

The REAL value of electronic forms  
Field intelligence  
Moving through the form  
Security  
Routing the form  
Tracking  
Version control  
Customising the interface  
Sequential numbering  
Scripting—some notes for beginners

### Chapter 37 Internet and Intranet Forms

Current technological approaches  
Making the decision

### Chapter 38 Testing Electronic Forms

The need for testing  
Areas to test
